

Saving YouTube Videos

Go to www.youtube.com

You will have to have TTC security settings to use this site!

Locate the video you want to save.

Click on the video and preview. You can click pause if you do not want to view the entire video.

(<http://www.youtube.com/watch?v=poFVMdQaUcc>)

In front of the url of the video, replace www. with the word kick.

(<http://kickyoutube.com/watch?v=poFVMdQaUcc>)

Select the format you want to save the video as (MP4 in this case) and click the word Go.

Right click on the word Down and select "Save target As", select the location to save the file, and name the file. Once the information is entered, click Save to start the download. A long video takes longer to download and takes more space on your hard drive.

Once you are finished with the video, it is recommended you delete it to conserve space on your computer.
